DETAILED ACTION

Election/Restrictions

This application contains claims directed to the following patentably distinct species of the claimed invention: Invention comprising I-b-1 plus numerous (b) compounds.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, an invention comprising I-b-1 plus one or more (b) compounds is generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

During a telephone conversation with Attorney R. Henderson on 11/24/05 a provisional election was made with traverse to prosecute the invention of I-b-1 plus diafenthiuron, claims 7-15. Affirmation of this election must be made by applicant in replying to this Office action. Claims 7-15 pertaining to all other combinations of (b) compounds with I-b-1 are withdrawn from further consideration by the examiner, 37 CFR 1.142(b), as being drawn to a non-elected invention.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 7-15 are rejected under 35 U.S.C. 103(a) as being unpatentable over Wachendorff-Neumann (WO 2000042850; 07/27/00) and Ruder et al (Pesticide Biochemistry and Physiology, 1991, 41(2), 207-19). US 6706758 is equivalent to WO 2000042850 and will be used as English translation.

Wachendorff-Neumann teaches a composition for controlling insects, comprising an insecticidally effective amount of I-b-1 plus additives such as extenders and surfactants. See

abstract. See abstract, column 1 line 34 – column 2 line 18. Wachendorff-Neumann teaches a method of preparing the composition comprises mixing the active (I-b-1) with surfactants and extenders. See column 2 lines 1-5. Wachendorff-Neumann teaches a method of applying the composition to the insects or their habitats and plants for protection against insects. See claims 1,8. Wachendorff-Neumann does not teach or suggest the invention comprising diafenthiuron. However, Ruder teaches a composition comprising diafenthiuron as a thiourea insecticide/acaricide. Ruder teaches that diafenthiuron functions by inhibiting the mitochondrial respiration by its carbodiimide product. See abstract. In the absence of unexpected results, it would have obvious to one having ordinary skill in the art to have modified the invention of Wachendorff-Neumann to include the diafenthiuron taught by Ruder. One would have been motivated to do this in order to enhance the effectiveness of controlling insect infestation by way of inhibiting mitochondrial respiration.

Election Status

The elected invention comprising I-b-1 and diafenthiuron is allowable. See rejection above.
